Explain what lessons you've learned during this project

During this project we learned how to create html elements directly from javascript and how in turn make the website dynamic and more interactive. We learned how to use local storage, how to better deal with objects and arrays that was both our weak points before starting this project and we gained an overall better understanding of Js. And as a bonus, we learned how to create simple js animations.

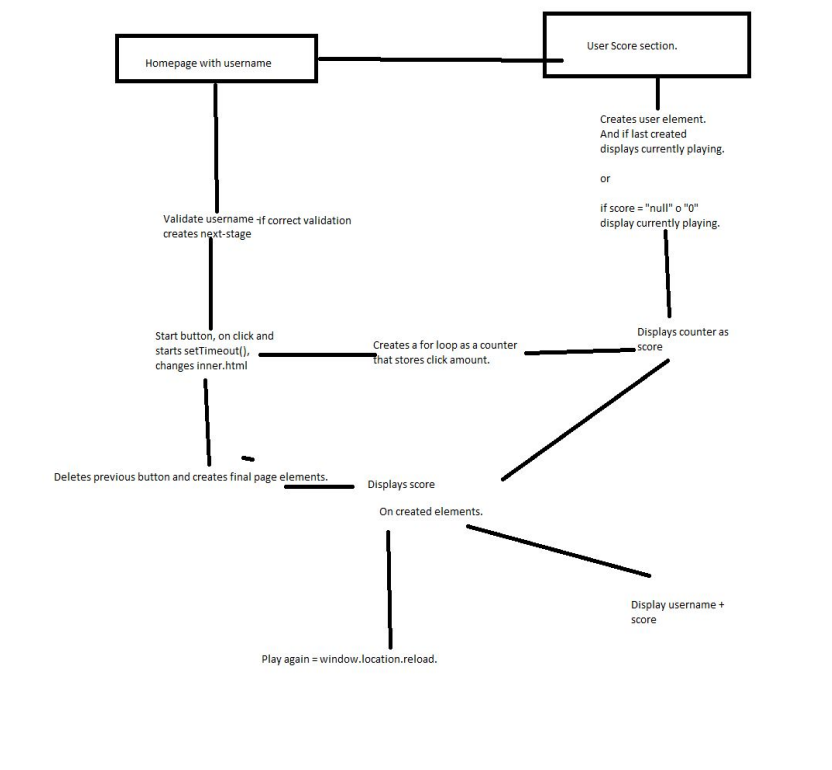
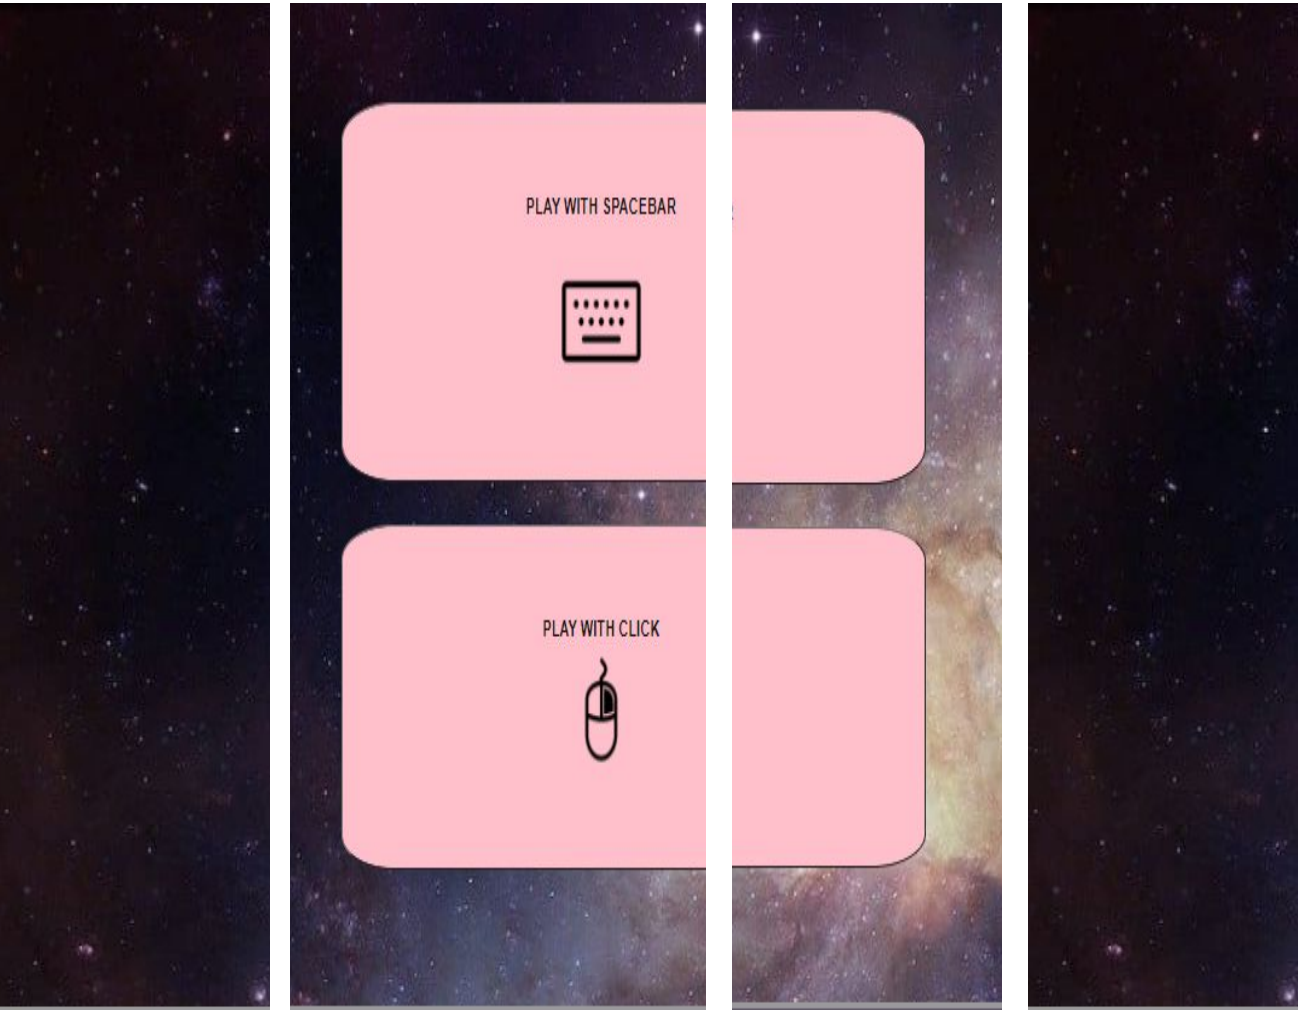
How have you decided to organize the three stages of the game that you have had to develop?

The right side image was the base for our project development altho we had to add on top of it more functions as we had to deal with local storage which we learned how to use only after the second day of the project.





Thank you
